Android Devices  
Samsung's Smart Manager  
App Optimisation

May 2016

**AppAce**  
Pty Ltd.

At the time of writing, there is an optimising program supplied on many Samsung devices. The battery optimising processes can also be accessed through an app called 'Smart Manager'. We have chosen to show how to access these options through the 'Settings' app on your phone.

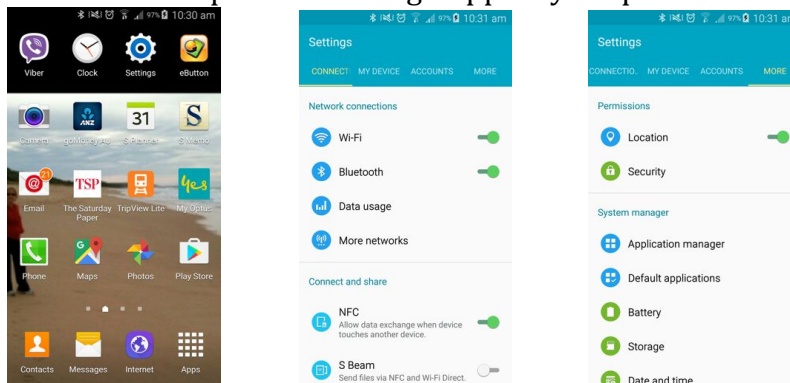

The 'optimising' process interferes with apps running in the background that have not been accessed for several days. The impact on the eButton app is to disconnect the Low Energy Bluetooth connection the app relies upon. On many devices, reconnecting to Bluetooth can then be a problem. The Android auto-reconnect function for Low Energy Bluetooth fails. Details of how to reconnect to Bluetooth if you experience difficulties can be found at

<http://www.ebutton.com.au/support>.

Other services such as push notifications and alarms are also effected.

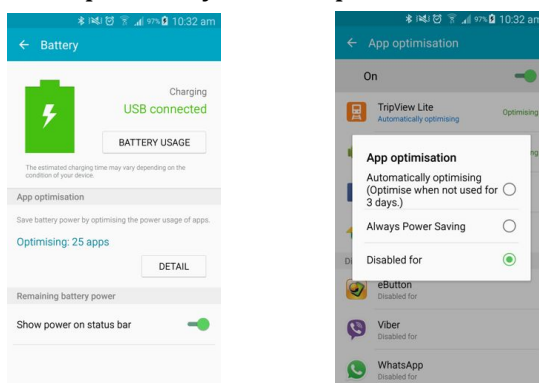

The screen shots are taken from a Samsung Galaxy S4.

### 1. Locate and open the 'Settings' app on your phone

### 2. If necessary, press 'More' to reveal 'Battery'

### 3. Tap 'Battery', then tap 'Detail'

### 4. Scroll down until you find 'eButton'. Tap 'eButton'

### 5. Select 'Disabled for'

The optimising program will no longer prevent the eButton app from running in the background.
